Describe your Drinking-Water System

The Sturgeon Falls WTP commissioned in 1991, consists of a full surface water treatment facility, with a design capacity of 14 200 m³/day, drawing water from the Sturgeon River. The process consists of:

- Intake from the Sturgeon River, equipped with manually removable screens
- Four vertical turbine raw water pumps
- Two up-flow pre-treatment tanks for flash mixing for chemical assisted flocculation and sedimentation
- Four sets of three-cells-in-series flocculation tanks
- Two rectangular settling tanks, each with an inclined plate settling system
- Three anthracite/sand gravity filters, each with continuous turbidity monitoring
- Chlorine gas for primary disinfection
- One chlorine contact tank equipped with baffle walls, and discharge line to the underground reservoir
- Continuous Giardia log removal calculations to monitor adequacy of disinfection
- Hydrated lime (calcium hydroxide) addition for pH and alkalinity control
- Two cell in-ground storage reservoir
- A two-chamber clear well
- Five vertical turbine type high lift pumps to Distribution
- Post-chlorine gas addition to Distribution with continuous monitoring
- Hydrofluosilicic acid (fluoride) addition to Distribution with continuous monitoring
- Filter backwash system consisting of two filter backwash pumps, serving all filters
- Backwash wastewater discharge to the backwash settling tanks
- Three backwash settling tanks; supernatant return to Sturgeon River; settled sludge to sludge thickening tanks
- Two square sludge thickening tanks; sludge discharge to municipal sewage collection system; supernatant return to the Sturgeon River
- Back-up diesel powered generator capable of servicing essential plant operations

List all water treatment chemicals used over this reporting period

- Polyaluminum chloride for coagulation
- Specialty polymer a coagulant aid
- Limestone for raw water alkalinity adjustments to improve coagulation
- Chlorine (gas) for primary and secondary disinfection
- Hydrated lime (calcium hydroxide) for finished water pH adjustment
- Hydrofluosilicic acid fluoridation
- Corrosion control and manganese sequesterant
